

# SPSS TEST VERSION A

**By now, you are expected to know how to do each of the following below. I will not provide reminders on the test itself, but you may bring any printed material you'd like to help you with the test.**

**Know when and how to round numbers correctly**

**Know how many decimal places to report numbers to**

**Know whether a "0" goes to the left of the decimal point**

**Know how to write out main and interaction effects using correct APA statistical notation format**

**Know how to use the "refined" (non)overlapping y-error bar rule to determine if two means are probably significantly different or not**
